

EULISES ORTEGA

LANDSCAPE DESIGNER

Throughout my career, I've had the opportunity to work on several projects, increasing my knowledge and skills over the years. I started by designing the landscape of houses in a local nursery; thanks to that later in a landscape firm I worked through all stages of the design and supervision of landscaping in projects of various scopes in retail, design of vertical buildings, and landscaping of mixed purpose buildings.

Also, in one of the companies I previously worked in; I collaborated with the local universities in the creation of districts where streets, trees, crosswalks and neighboring parks were intervened in order to enhance the appeal and quality of life in local communities. I find this specific work very inspiring, and it has changed greatly my view on landscape architecture and the impact it can have on people and communities.

I am convinced that landscaping and urban design are my ideal career, in which I can learn, grow and contribute to the important impact of design on human life
